Journal Date	Feb-29-2020	Dec-31-2019	arar	2020-01-21 13:02:57

Enhancements - Powerpay

Security enhancements

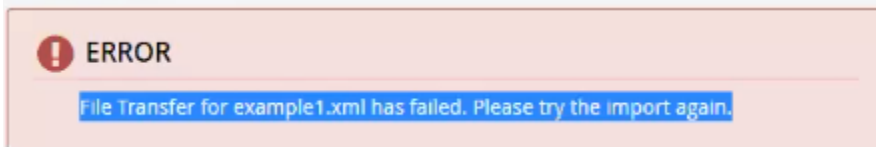

Virus scan on all files uploaded into Powerpay

For improved security, a virus scan is now performed on all files uploaded to Powerpay. If the file fails the virus scan, the file is not uploaded, and an error message displays.

DOCTYPE tags blocked

To improve security, DOCTYPE tags are now blocked on all files uploaded to Powerpay, including import files, and an error message displays.

File types available for upload

To enhance security, Powerpay now limits the types of files that can be uploaded. Powerpay also verifies that the contents of the files uploaded are of the format declared by the extension and that they are of the correct type for the functionality on the page where the file is being uploaded.

The following file types are accepted based on the action being performed:

- Manual Import - .xml
- Custom Import and Custom Import Setup - .txt, .csv
- Employment Verification Letter - .jpg, .png

If the file is of the incorrect type or contains data of the incorrect type, Powerpay displays an error message:
